ABOUT US

bit.net

BitNet company is a software implementation and information systems consulting firm based in Warsaw, Poland. Company is currently recognised as specialised transactional system developer and provider of complex information services.

The first projects of BitNet date back to the times of economical changes in Poland after 1989. In the beginning of the 1990ties many high-tech companies where established in Poland to support technological revolution and computer expansion. For a few years we were the exclusive partner of the biggest software companies in the field of system and project documentation production.

Starting from 1994 we were involved in the project which completely revolutionised the old-fashioned weekly magazines publishing system. The technology used in that project created the possibility for preparing immediate layouts while editing text, pictures and photos. Since then electronically created forms are sent through ISDN connection directly for printing utilities in Germany.

In the following years we were co-operating with the leading Polish mobile telephone network operator. Our main activity was support and development of Network Management System. The effect of this was, among others, successful safeguarding against Y2K problems.

It's worth mentioning that our Web based reporting system prepared for the international management of Saatchi&Saatchi provides fully secure data exchange. The system enabled viewing of the financial data from all around the world.

Last but definitely not least chapter in BitNet history is co-operation with Nestle the world's biggest food producer. We re-developed transactional systems which manage purchasing, fixed assets and budget. After two years of successful co-operation, which continues until now, BitNet has re-cognised Nestlé as its strategic customer.

BRIEF HISTORY

The most important value for the company is very simple: high level of customer satisfaction, which is the basis for BitNet team contentment. To achieve this, BitNet concentrate on constant improvement of qualifications and discover new area of Information Technology. BitNet always work very closely with their customers to understand their needs well and to deliver best possible products and services.

GOALS

BitNet is a company working only on selected projects. Its goal is not an uncontrolled growth but improvement in services quality, internal management and qualification of its team. BitNet wants to be recognised as very competitive, highly qualified and specialized Company.

The company decided to outsource all office administration and accountancy to minimise administrative overloading. Our experience, theoretical background and well-organised teamwork are a key to BitNet's success. Apart from high qualification and competitive rates we offer high flexibility, which results in keeping company relatively small.

STRATEGY

The key to success of a company like BitNet is its team. There is no place for lack of professionalism. BitNet team includes experienced professional programmers, software engineers and business analysts.

The core team includes ten very experienced and enthusiastic people, who are at the same time open-minded and willing to learn. All BitNet specialists have university level education, excellent professional skills, and good command of English. BitNet consultants will travel abroad if necessary. The team hierarchy is project oriented, which additionally motivates the team and at the same time increases integrity.

Depending on the scale of the project BitNet can provide more specialists on contract basis, besides its core team.

TEAM

OFFER

BitNet designs, develops and delivers modern information systems. Besides implementation, training and operation services, we specialise in on-demand software development. Our goal is to provide services for local, international and foreign customers. The Company is strongly customer focused. We do understand that especially in the service business, it's extremely important to keep our clients confident in us and in our software. Quality of services is our key success factor and we are always happy to hear from our customers about the areas where we can improve. We offer a high level of flexibility and competence to satisfy our customer's needs.

INTRODUCTION

bit.net

BitNet, a company with core team of young but experienced professional programmers, software engineers and business analysts, as the main activity targets Dedicated Software Development. The company focuses mainly on Microsoft Windows Platforms and IBM AS400, and is ready to complete projects with different complexity level. Software development by BitNet covers different application types starting from classical client-server applications, through data-warehouses and reporting systems up to web based programmes. From the programming methodology point of view BitNet specialists represent high understanding of object-oriented programming as well as classical methods. BitNet cares about universality, extensibility and in general high quality of delivered programmes. Developed application will always pass internal quality check phase, which is treated as a part of development process. All programmes are delivered together with technical documentation, which makes them much easier to maintain. The company has outstanding experience in transactional business applications design and development. BitNet can cover the whole development cycle starting from functional and technical analysis, through design, coding and tests, up to implementation and key user training. Excellent programming techniques and methodology used by BitNet have been proved in many successfully delivered systems during the last decade.

DEDICATED SOFTWARE

Software integration becomes one of the most important tasks in each enterprise where many different applications are used. Integration of existing software gives the possibility to fully benefit from electronic data and usually effects in improvement of business processes. System integration requires good knowledge of all components and thus is not a trivial task. Software integration requires education, experience, creativity, and willingness to learn only such a team can guarantee success. BitNet recognises and utilises its potential in that area and is proud to be very effective in delivery of middle-ware systems. Mentioned systems work across different platforms and applications and their development usually involves specialists from different technical and business areas. BitNet software integration is highly appreciated by its customers.

INTEGRATION/MIDDLE-WARE

bit.net

Organisation of support and maintenance of application is one of the key factors of successful information system deployment. BitNet represents knowledge necessary to support application after development phase. Such support requires excellent technical knowledge as well as very good knowledge of the functional layer of applications. To fit into changing environment, each software product usually requires adaptations and modifications. As one of its basic services BitNet offers an ongoing system support, maintenance and monitoring. Mentioned services can be both remote and customer based. The company works with its customer on support projects based on predefined and agreed Service Level Agreements. BitNet is ready to propose some standard solutions in that area and is always open to meet the client's specific needs. BitNet is able to provide dedicated resources to complete all support tasks on short as well as long term basis.
